Róbmy roboty

- Kluczem do współczesnej medycyny jest wzrost produktywności i standaryzacja. Nie da się tego zrobić bez automatyzacji i robotyki – od procesów decyzyjnych po terapię i rehabilitację.
- Ze względu na zagrożenia demograficzne, a także wpływ CoVid, ważną zaletą stosowania robotów jest zmniejszenie wymagań dotyczących zatrudnienia – zarówno pod względem liczby, jak i umiejętności czy wykształcenia. Roboty dodają kompetencji i efektywności tam, gdzie ich brakuje.
- Po postępie telekomunikacyjnym – przesyłaniu INFORMACJI na odległość, przyszedł czas na transmisję DZIAŁAŃ na duże odległości. Teleakcja. Do tego potrzebne są roboty.
- Rynek robotów medycznych rośnie o około 20 % rocznie.

DEPARTMENT OF HEALTH AND HUMAN SERVICES Health Resources and Services Administration SAMPLE PROJECT WORK PLAN	FOR HRSA USE ONLY Application Tracking Number

Section A - Comprehensive Needs Assessment

Goal A1: Identifying major health issues for the populations to be served, unmet need, barriers to care, etc.

Objective(s)	Key Action Step(s)	Expected Outcome(s)	Data Evaluation and Measurement(s)	Person / Area Responsible(s)	Comment(s) (Maximum 500 characters)
A1.1 Develop protocol and measures for implementing needs assessment within two months of grant award. A.1.2 Establish a team of knowledgeable planning staff to oversee undertaking of needs assessment within one month of grant award. A.1.3. Complete needs assessment for targeted service area within 4 months of award. A2.3 Secure consultant to assist with needs assessment.	1. Identify appropriate tools to use for the needs assessment. 2. Establish Subcommittee of the planning staff to oversee needs assessment. 3. Define roles of planning staff and for the project.	1. Participate in the comprehensive needs assessment elements meeting with area stakeholders. 2. Create tangible targeted assessment protocols and tools for identified populations in collaboration with other health centers. 3. Conduct at least one coordinating meeting every month. 4. Completed needs assessment.	1. The number of planning meetings. 2. Determination made regarding approach. 3. The number of meetings attended. 4. Number of persons at each meeting. 5. Progress against established timeline for completion of assessment.	1. Planning Grant committee 2. CEO 3. Board of Directors 4. Consultant

Prof. Andrzej Bochenek & Zeus& AESOP Katowice SUM

ŚLĄSKI UNIWERSYTET MEDYCZNY W KATOWICACH

In **2002,** the clinic in Katowice Ochojec rented the **ZEUS** robot from Computer Motion in California for research purposes for a period of approximately 3 months. The initiator of research on the use of a robot in heart surgery was prof. A. Bochenek. 10 heart surgeries were performed..

In **2001,** the first robotic assistant **AESOP** (Automated Endoscopic System for Optimal Positioning) was imported from the United States to this clinic, used to hold an endoscopic camera and support minimally invasive surgeries. It was the first medical robot in Eastern Europe that served as an automatic assistant, among others. in coronary artery bypass surgery (by-pass) for over 300 operations.

Wrocław: Robot chirurgiczny gotowy do pracy
SZEJ
9 grudnia 2010, 12:42
Pierwszy w Polsce nowoczesny robot chirurgiczny Da Vinci został dziś zaprezentowany w szpitalu przy ul. Kamieńskiego.

„Pierwszą operację z jego wykorzystaniem prof. Wojciech Witkiewicz przeprowadzi operację w poniedziałek. Zabieg odbędzie się przy udziale specjalistów z zagranicy. Za pomocą robota, którym steruje lekarz, zostanie zoperowany 50-letni pacjent z nowotworem jelita grubego. Urządzenie kosztowało 8 mln zł. NFZ nie refunduje na razie zabiegów przeprowadzanych za jego pomocą. Szpital będzie zdobywał pieniądze na ten cel z fundacji i grantów naukowych.”

The work presented in this article received funding from the EU's Horizon 2020 research and innovation program under grant 825003 DIH-HERO.

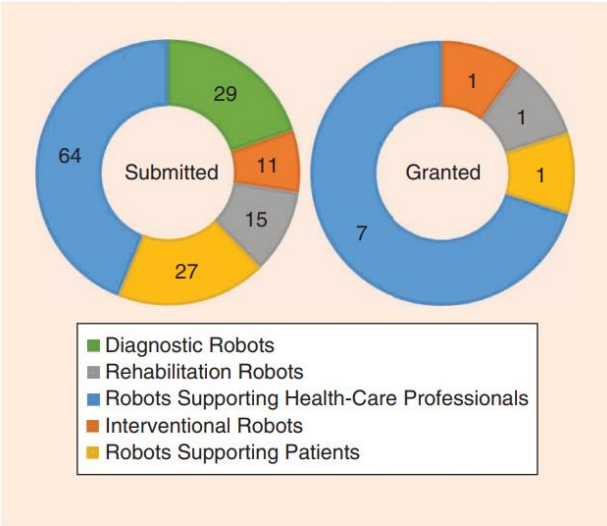

Figure 2. An overview of health-care robotics application areas within the DIH-HERO call for funding in health-care robotics fighting COVID-19.

Table 2. An overview of the main technical features of the DIH-HERO industry projects.

Project Acronym	Project Aim	Distinctive Feature(s)	Results/Impact on COVID-19 and Beyond
DisiRT	Autonomous disinfection of isolation ward areas	Multimodal disinfection	Real-time visual feedback with safety features
DROPAC	Autonomous disinfection of radiology treatment rooms	A 360° computer vision system used to track people in the vicinity of the robot	Disinfection benchmarking against manual techniques (time and effectiveness); an interactive graphical user interface; hospital proof-of-concept validation
Lio	Personal patient assistance; disinfection of nursing homes	Seamless transition between the social and disinfection robots	UVC disinfection of frequently touched surfaces (door handles)
Tele-AX	Home-based rehabilitation	Remote, data-driven therapy program	Telerehabilitation system for upper-extremity training in simulated and real operational environments
SAM-Air	Autonomous disinfection of public environments	Probiotics cleaning sprays	–
ARODIS	Autonomous disinfection of public environments	Human-detection safety feature based on four RGB cameras	UVC dose versus distance characterization
STERY	Autonomous disinfection of public environments	High power-density UV; autonomous charging at the provided docking station	Effectiveness of delivered UVC dose; a mobile app for disinfection configuration
TIAGo delivery	Autonomous transportation of sensible goods	Multisensory system for SLAM and object recognition and precise delivery	Logistic solution adaptable to varied environments
UDS	Autonomous disinfection of public environments	Ionized hydrogen peroxide spray, the VIPER Perception System, and the ORCA smart navigation system named *ORCA*	Spraying disinfection solution validated in the clinical settings and by the virus biomarkers
ROB-ID	Autonomous vaccine delivery	Standardized intradermal vaccine injection	Increased vaccination coverage; solved vaccine shortages (10% of the dose is needed)

SLAM: simultaneous localization and mapping.

FIRST STEP FOR AUTONOMOUS MEDICAL ROBOTS

Let’s build **Medical Robot**” by Zbigniew Nawrat nawrat@frk.pl … SUM,FRK, ISMR, Zabrze, POLAND

*The **CorPath GRX***
robotic surgical device from Corindus Vascular Robotics.

In March 2018, **Corindus** Vascular received 510(k) clearance from the U.S. Food and Drug Administration (**FDA**) for the **first automated robotic movement** designed for its CorPath GRX platform. Called **"Rotate on Retract" (RoR),** the proprietary software feature is the first automated robotic movement in the technIQ Series for the CorPath GRX platform. It allows the operator to quickly navigate to a targeted lesion by automatically rotating the guidewire upon joystick retraction.

SCIENCE ROBOTICS • 10 Nov 2021 • Vol 6, Issue 60 • DOI: 10.1126/scirobotics.abi8017

„Just more than three decades ago, the first roboticists began to explore the use of robot manipulators for performing surgical procedures. Two decades ago, the first commercial systems were installed in hospitals. In the past decade, the field of medical robotics has gained momentum, and thousands of robotic surgical systems are now installed in clinics around the world" „ An **evolutionary trend toward progressive automation** will provide time for the necessary technological developments in algorithms and sensors while allowing stakeholders time to progressively construct an appropriate regulatory and legal framework

P. E. DUPONT …

Let's build **Medical Robot**" TRENDS

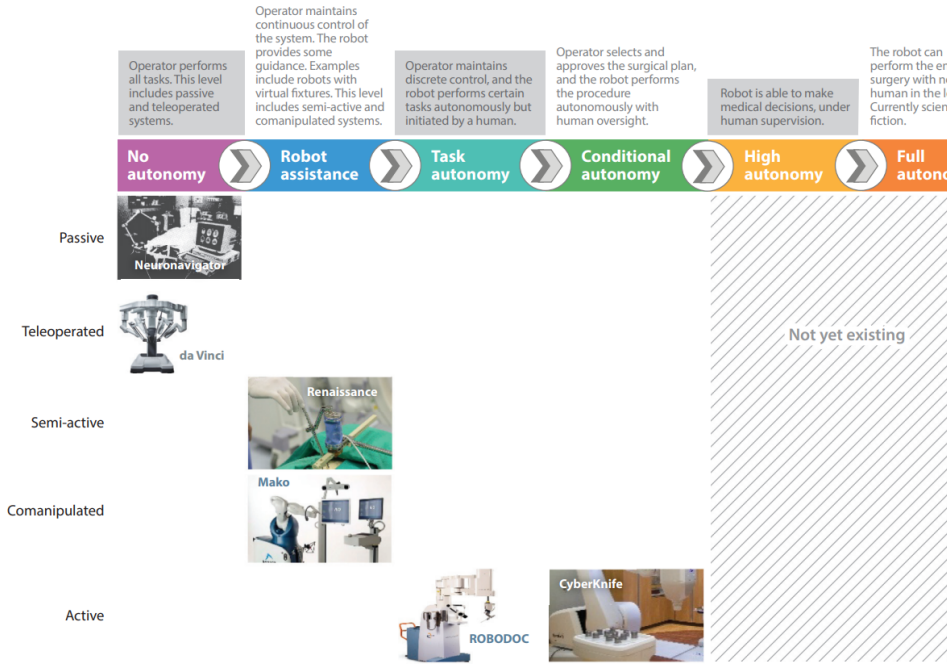

Figure 4

Different levels of human–robot interaction and autonomy mapped to medical robots. Levels of human–robot interactions are described in Reference 132; decision levels are described in Reference 122. Images are adapted with permission as follows: Neuronavigator, Reference 145; da Vinci, Intuitive Surgical Inc., © 2018; Mazor Robotics Renaissance, Mazor Robotics; Mako, Reference 131; ROBODOC, Reference 130; CyberKnife, Wikimedia Commons.

FULL AUTOMATION Level 5
No human operator is needed. This is a "robot expert" that can perform an entire task automatically.

HIGH AUTONOMY Level 4
The robot can make decisions but needs to be under the supervision of a qualified user.

CONDITIONAL AUTONOMY Level 3
The system can generate task strategies but relies on the user to select and approve a strategy.

TASK AUTONOMY Level 2
Robot performs certain operator-initiated tasks autonomously

ROBOT ASSISTANCE Level 1
User maintains continuous control while the robot provides some assistance

NO AUTONOMY Level 0
The system is controlled manually to follow the user's commands.

First industrial revolution	**Second industrial revolution**	**Third industrial revolution**	**Fourth industrial revolution**
The first industrial revolution occurred at the end of the 18th century and was driven by mechanization based on steam and water power.	The second industrial revolution started at the beginning of the 20th century. It was driven by electricity and enabled mass production by means of assembly lines and division of labor.	The third industrial revolution started in the 1970s and was driven by computer technology, which was used to further automate machines and production processes.	The fourth industrial revolution, which is ongoing, will prospectively lead to smart factories and a comprehensive digital and interoperable ecosystem of machines and partners.

Fifth revolution? AI – driven industry

without people? for people?

WHY ?

MIS AI

MIS AI

The **robot** is not a machine but an **IT device** that creates a great opportunity for the integration of the entire diagnostic system with the operator. Surgery is a specific type of medical activity that uses direct physical methods of intervention in a body area damaged by illness or injury.

In my opinion, artificial intelligence is a part of robotics. Generally, **artificial intelligence was created for communication between machinery and human intelligence.**

If, however, we assume that we would like to operate in a place where our intervention is necessary by methods that reduce the risk of damage to healthy tissues as much as possible, it means the loss of the ability to freely view and touch the tissue, the inability to directly insert our hands in the place of surgery. This is the current MIS dilemma.

Is this beneficial for the patient? Can a surgeon possibly do this?

This is a challenge for creating new tools and both artificial intelligence and robots are one of them.

The less invasive the surgery,
the less visual and sensory information we have -
the more the role of AI increases.

MIS AI - artificial intelligence application in minimally invasive surgery Zbigniew Nawrat

Introduction to AI-driven surgical robots

Zbigniew Nawrat[1,2]

Why does AI help surgeons? AI can help to improve surgical outcomes by providing surgeons with realtime information and feedback, enhancing surgical planning and decision-making, and reducing the risk of complications during surgery.

Why do robots need AI?

Robots need AI to be able to operate autonomously, make decisions, and perform complex tasks. AI allows robots to learn from experience and adapt to new situations, making them more flexible and versatile in their abilities. Without AI, robots would be limited to performing a predefined set of tasks and would require constant human intervention and programming to adapt to new environments or situations. However, with AI, robots can learn from their interactions with the environment, and use that knowledge to make decisions and perform tasks more efficiently.

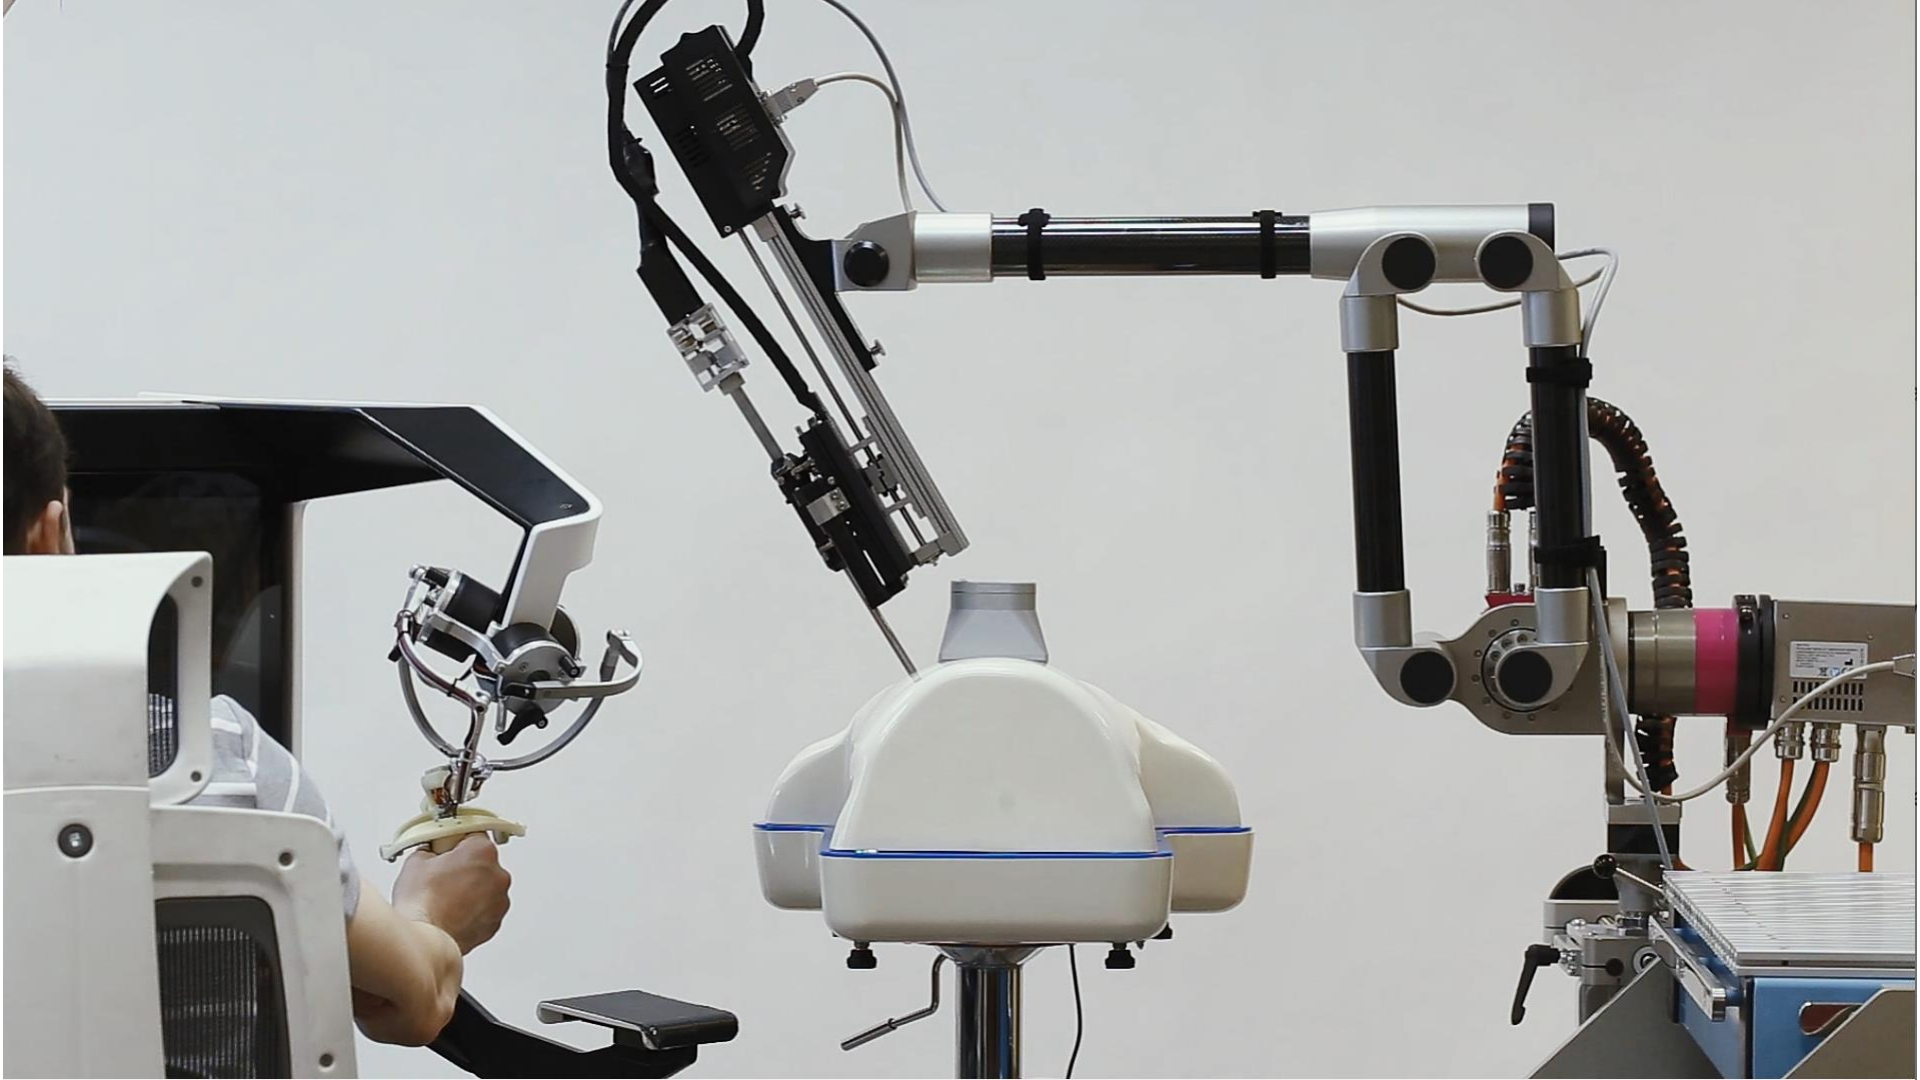
Intelligence means the right reaction to the information received.

https://oaepublishstorage.blob.core.windows.net/cccaccf3-537d-41e9-911f-c56837269138/5701.pdf

Currently, medical robots and AI support medical services in the richest countries in the world. The capitalist system, of course, requires a return on investment and an opportunity for shareholders to enrich themselves. However, **the real breakthrough will occur when medical robots begin to help those who cannot afford "normal healthcare services", when an added group of beneficiaries appears. …** **I have no doubt that without AI, robots will never overcome this barrier - the barrier of interest and business.**

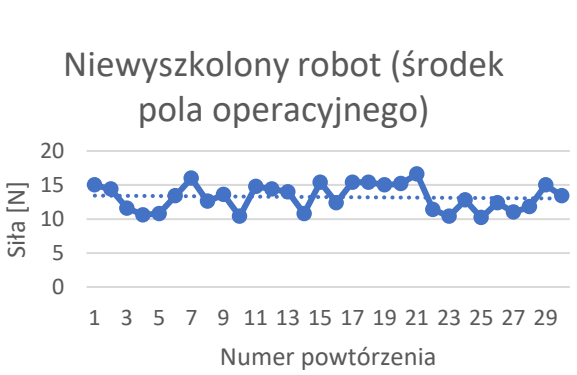
AI is here to communicate with human intelligence,
to free up human hands,
and to enable humans to return to being human.

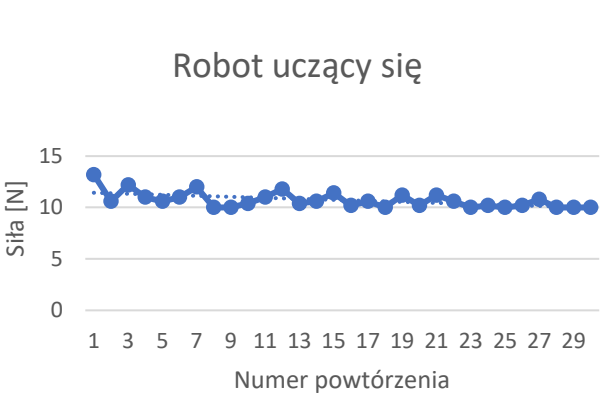
Robin Heart AI

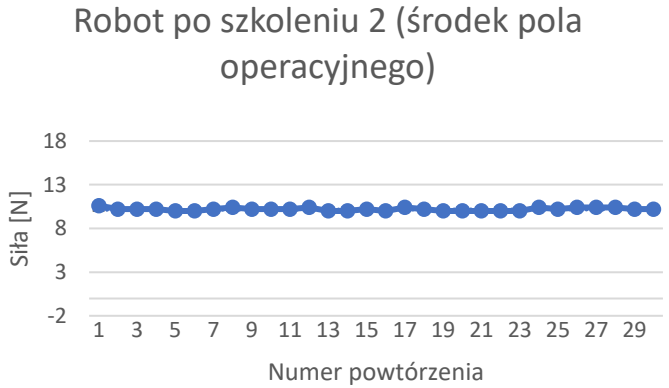


Robin
Stiff Flop
Console
Robin Heart Console

Robin Heart AI: „W trakcie pierwszej próby testowania automatycznej elektrokoagulacji robot ustawiał się w miejscu wykrytego krwawienia, po czym wykonywał ruch w osi z, aż do osiągnięcia zamierzonej siły 10 N. Jednakże na dokładność wykonanego zadania wpływ miała bezwładność oraz prędkość hamowania narzędzia mechatronicznego. Po zakończonym treningu średnia siła wykonywanej elektrokoagulacji wyniosła 10,09 N, co znacznie przewyższa dokładność wykonywanego zabiegu ręcznie przez człowieka”







METODY

DIGITALIZACJA
otworzyła medycynę na AI

Roboty i AI zmieniają medycynę

Robot

Let’s build **Medical Robot**” by Zbigniew Nawrat nawrat@frk.pl … SUM,FRK, ISMR, Zabrze, POLAND

Robot to też AI

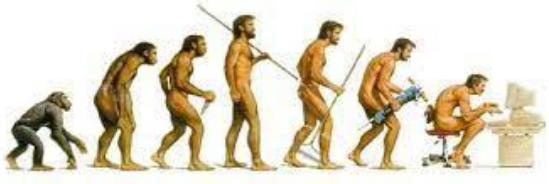
Let’s build **Medical Robot**” by Zbigniew Nawrat nawrat@frk.pl … SUM,FRK, ISMR, Zabrze, POLAND

„Robot” – wynalazek Karel Capek 1921

Tradycyjna **definicja robota** oznacza **sztucznego człowieka**.
Robot powinien mieć możliwość poruszania się (zdolność do **wykonywania pracy** mechanicznej), **zdolność do podejmowania decyzji** na podstawie informacji dostarczanych przez zmysły (**inteligencja**).

Roboty

Roboty i AI są ewolucyjną konsekwencją rozwoju narzędzi – od sterowanych i uruchamianych przez człowieka narzędzi ręcznych,
przez maszyny, manipulatory do samodzielnych urządzeń wykonawczych.



Medycyna

Róbmy roboty medyczne, stosujmy AI.
Bo inaczej nie damy rady pomóc wszystkim starym, niedołężnym, chorym czy niepełnosprawnym.
Roboty medyczne są niezbędne z powodów humanitarnych.
I z powodu możliwości osiągnięcia najwyższej jakości usług medycznych.

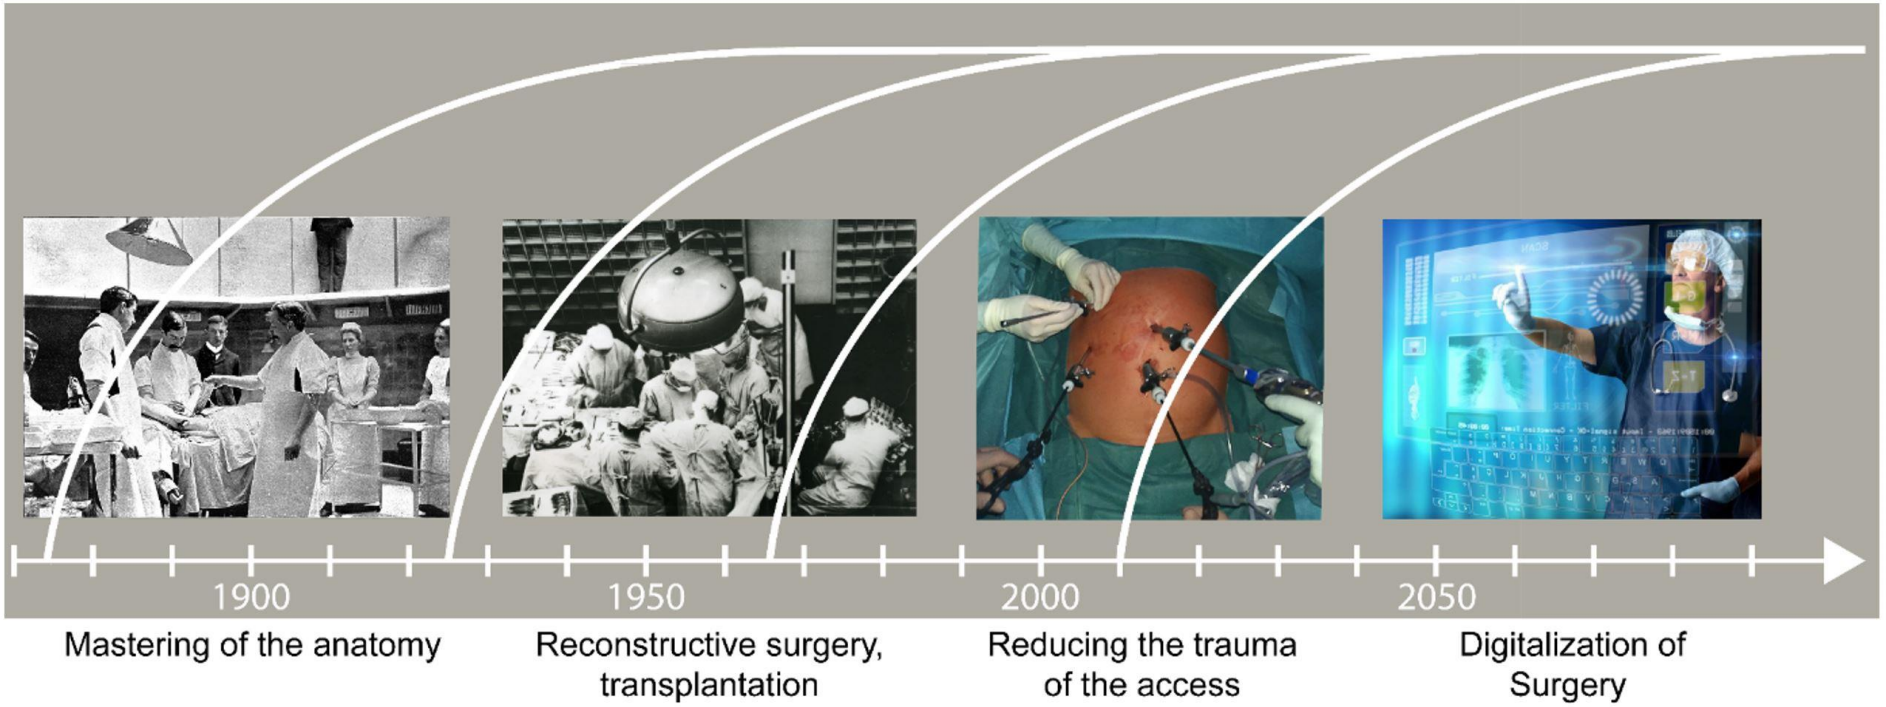
In AI Surgery ed.Gumbs, Karcz, Nawrat



Usługa medyczna to jest proces

Łańcuch od przewidywania > ostrzegania> nadzorowania> diagnozy> terapii> rehabilitacji do spersonalizowanej i ciągłej opieki domowej

Personel medyczny, człowiek jest najcenniejszym elementem tego łańcucha i najbardziej krytycznym,

Personel medyczny,
czuły na różne warunki
zewnętrzne (np.CoVid)
i posiada ograniczenia
w zakresie nadzoru
nad danymi i wyciągania
szybkich i adekwatnych
wniosków oraz działania
bez względu na warunki

„ O robotach …” Zbigniew Nawrat nawrat@frk.pl … SUM,FRK, ISMR, Zabrze

Dlatego AI i roboty medyczne znajdują tutaj swoje miejsce szczególne wiążąc, uszczelniając, rozwijając do perfekcji system, proces, usług medycznych

Łańcuch od
przewidywania > AI
ostrzegania> AI
nadzorowania> AI
diagnozy> AI
terapii> AI
rehabilitacji do spersonalizowanej i ciągłej opieki domowej AI

Moja propozycja:

AI jako „ czuły obserwator” w każdym węźle.

5/100/s

Borys Fiodorowicz

Każdy łańcuch jest tak dobry jak jego najsłabsze ogniwo

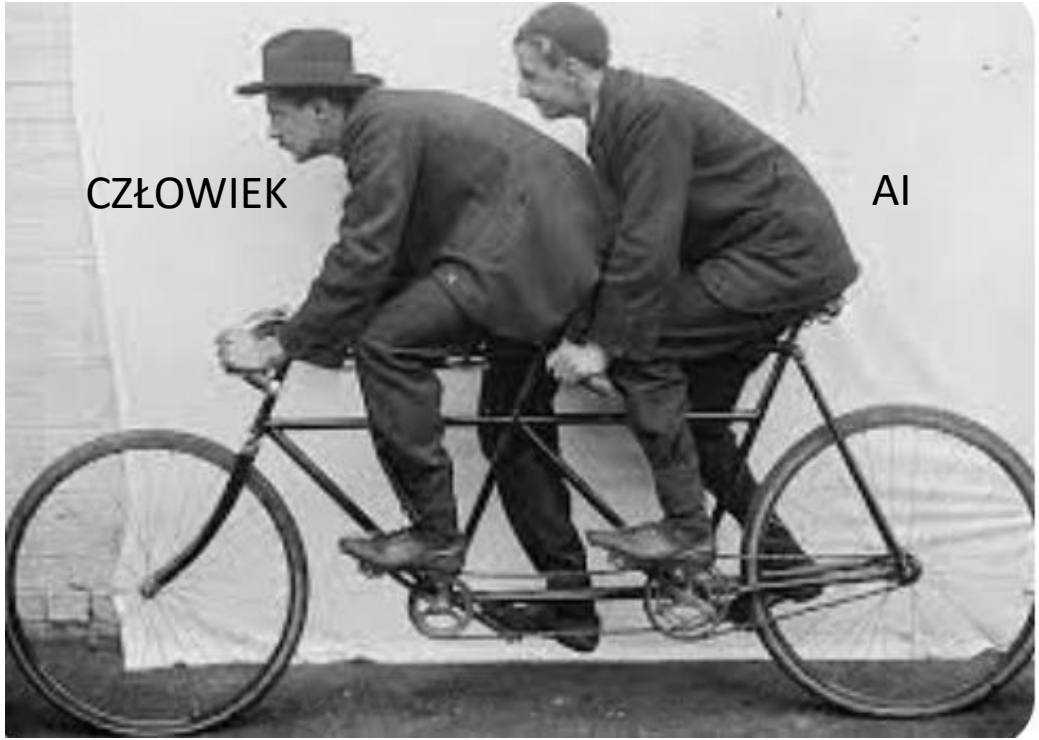
„ O robotach …” Zbigniew Nawrat nawrat@frk.pl … SUM,FRK, ISMR, Zabrze

SHIMANO
SHIMANO

Łańcuch w takim sensie jak tu – czyli z ogniwem AI również napędza system

„ O robotach …” Zbigniew Nawrat nawrat@frk.pl … SUM,FRK, ISMR, Zabrze

Potrafisz tylko siedząc przebierać nogami – a tu proszę i wzmocnienie i możliwość osiągnięcia celu niedościgłego dla samych nóg – w dodatku siedząc



CZŁOWIEK
AI

Łańcuch usług medycznych zaczyna się od ZAPOBIEGANIA, PROGNOZY, **UCHWYCENIE ZMIANY I ANALIZA ORAZ PRZESŁANIE INFORMACJI DO CENTRÓW KOMPETENCJI**, DIAGNOSTYKA, TERAPIA, REHABILITACJA, OPIEKA DOMOWA

Człowiek jest jednak .....Analogowy.

Człowiek jest jednak …. Analogowy.

I to cyfrowanie danych o nim otworzyło tą możliwość włączenia człowieka do systemu, który wykorzystuje maszyny i jest nadzorowany przez programy komputerowe.

The Professor Zbigniew Religa Foundation of Cardiac Surgery Development

Już obecnie na świecie potrzebujemy

100mln lekarzy,
300 mln opiekunów domowych,
pielęgniarek, inżynierów medycznych …..

Roboty i AI wprowadzamy
w przemyśle i usługach,
bo potrzebujemy coraz więcej ludzi
dla … ludzi

Roboty i AI potrzebne są byśmy mogli świadczyć lepiej usługi medyczne …

Pośrednio - by nas było na to stać i by coraz więcej z nas mogło służyć innym ludziom w potrzebie

Bezpośrednio – by podnosić jakość usług i rozszerzać dostęp do spersonalizowanej medycyny adekwatnie do potrzeb, we właściwym czasie i miejscu

W medycynie nie chodzi o to by żyć najdłużej tylko by każdy miał szansę je przeżyć – wbrew chorobom, wypadkom czy innym losowym zagrożeniom, które czyhają na każdego z nas.

Lekarz lecząc pacjenta naprawia kawałek świata

Let’s make robots

…. bo rzeczy naprawdę **wielkie**

robimy z ciekawości

rzeczy naprawdę **ważne**

z potrzeby pomocy drugiemu człowiekowi

Dziękuję wszystkim współpracownikom z FRK, SUM, przyjaciołom z wielu ośrodków akademickich, sponsorom, grantodawcom, i pacjentom – za ich wiarę, że zdążymy..

Dziękuję za zaproszenie…

nawrat@frk.pl

Dziękuję za fotografie Mariuszowi Jakubowskiemu z FRK i za niezwykłe portrety znakomitemu **Rafałowi Maslow**.

This is us

Prof. Zbigniew Religa Foundation of Cardiac Surergery Development (FRK) is established in 1991. **FRK**, is known for its achievements, research and implementation, promotion and education related to technologies saving cardiac surgery patients. The Polish system of mechanical heart support has been clinically implemented since 1993. The license for the Robin Heart PortVisionAble - one of the representatives of a large family of medical robots and mechatronic tools developed here - was sold in 2019. FRK is therefore a pioneer of healthcare robotics in the field of artificial organs and surgical robots, has well-equipped research laboratories and experience in technical, biological and clinical experiments.

Robin Heart –
